

VARIEGATION:

- great for brightening dark area
- limit number of variegated plants—like mixing plaid and stripes
- great as focal point
- normal pt of green replaced by white, yellow, cream, etc stripes, blotches
- generally, variegated plants not as vigorous as plain green, due to getting less chlorophyll thru variegation
- tend to have more insect issues
- if they don't get enough light, may revert back to all green
- looks great against dark green backgrounds
- good for separating clashing colors in borders
